

Midterm Task 5
Creating Class and Instantiating Objects in Python

Problem 1. Users in Social Media

a. Create User Class with the ff: attributes (Use Constructor for this)

- first_name
- last_name
- followers_count
- friends_name [LIST]

Note: You can make a List an attribute of a class

b. Create the ff: methods

- introduce_self – which should output “ Hi I am {first_name} {last_name}
- view_full_profile – which outputs all the information of the user as shown below

Profile Name is Bradd Pitt with 10 followers
Friend are... Juan Pedro Jose

c. Create a separate TestUser class to test if the program is working as expected, allowing for user input to be passed as parameters of the object. Create atleast 2 object instance to test the class template

SAMPLE OUTPUT 1:

```
Insert a Record?[y|n]: y
First Name: Charles Edrick
Last Name: Ngo
Followers: 12m
Friends (comma-separated): Tan,Dexter
Insert a Record?[y|n]: y
First Name: hikaw mabha
Last Name: ho
Followers: 168b
Friends (comma-separated): Sorriano,Pancho
Insert a Record?[y|n]: n
Here are the Records....
Hi I am Charles Edrick Ngo
Profile Name is Charles Edrick Ngo with 12m followers. Your friends are: Tan, Dexter
Hi I am hikaw mabha ho
Profile Name is hikaw mabha ho with 168b followers. Your friends are: Sorriano, Pancho
There are currently 2 Members in the Social Media page
\

...Program finished with exit code 0
Press ENTER to exit console.
```

```

class User:

    def __init__(self, first_name, last_name, followers_count, friends_name):

        self.first_name = first_name

        self.last_name = last_name

        self.followers_count = followers_count

        self.friends_name = friends_name

    def introduce_self(self):

        return f"Hi I am {self.first_name} {self.last_name}"

    def view_full_profile(self):

        friends_str = ", ".join(self.friends_name)

        return f"Profile Name is {self.first_name} {self.last_name} with {self.followers_count} followers. Your friends are: {friends_str}"

```

```

class TestUser:

    def __init__(self):

        self.users = []

    def create_user(self):

        while True:

            insert_record = input("Insert a Record?[y|n]: ")

            if insert_record.lower() != 'y':

                break

            first_name = input("First Name: ")

            last_name = input("Last Name: ")

            followers_count = str(input("Followers: "))

            friends_input = input("Friends (comma-separated): ")

```

```
friends_name = [friend.strip() for friend in friends_input.split(",")]
```

```
user = User(first_name, last_name, followers_count, friends_name)
```

```
self.users.append(user)
```

```
def display_records(self):
```

```
    print("Here are the Records....")
```

```
    for user in self.users:
```

```
        print(user.introduce_self())
```

```
        print(user.view_full_profile())
```

```
    print(f"There are currently {len(self.users)} Members in the Social Media page")
```

```
