

Problem 1. Create the following UI for menu items: then allow the user to input orders

The user will continue to input orders until q is typed to quit. Then display the summary of orders with the total bill.

1. Use a dictionary(for the menu) and List(for the orders in the cart)
2. Users may input the same item in the cart.
3. Follow the exact format and whitespace for the menu
4. User input should be case insensitive
5. If the user inputted an item not in the Menu – it will not include it in the cart and display “Not Available” and input another item
6. Create a MENU with 10 items and assign prices in Peso (php) - You may choose what items you would like to put in your cart

SAMPLE OUTPUT:

```
----- MENU -----
burger      : ₱100.00
fries       : ₱35.00
soda        : ₱25.00
pizza       : ₱120.00
spaghetti   : ₱110.00
salad       : ₱70.00
ice cream   : ₱50.00
coffee     : ₱90.00
water       : ₱25.00
nachos      : ₱100.00
-----
Select an item (q to quit): nachos
Select an item (q to quit): pizza
Select an item (q to quit): nachos
Select an item (q to quit): fries
Select an item (q to quit): q
----- YOUR ORDER -----
nachos pizza nachos fries
Total is: ₱355.00

=== Code Execution Successful ===
```

SOURCE CODE:

```
menu = {  
    "burger": 100.00,  
    "fries": 35.00,  
    "soda": 25.00,  
    "pizza": 120.00,  
    "spaghetti": 110.00,  
    "salad": 70.00,  
    "ice cream": 50.00,  
    "coffee": 90.00,  
    "water": 25.00,  
    "nachos": 100.00,  
}  
  
print("----- MENU -----")  
for item, price in menu.items():
